

University of Exeter

T level requirements

The University recognises the T level qualification and the increasing number of T level programmes available. We have updated our undergraduate course webpages to include T level qualifications within our entrance requirements. This includes our standard offers and any subject requirement equivalencies.

Course webpages

“The University of Exeter welcomes applications from a wide variety of applicants who may be studying a variety of different qualifications.”

Claire Galliford, Deputy Head of Admissions.

The table below provides more detail on our T level acceptance:

All T levels accepted	Many of our undergraduate courses are available to study via any T level course qualification. Look at our course webpages to check the standard offer for a T level applicant.
Specific T level requirements (including additional study requirements)	Some of our courses require applicants to study specific T levels. This is common in modern foreign language, engineering, geology, nursing and many science-based subjects. Look at our course webpages to see which specific T levels are required for the course you’re interested in.
T levels not accepted	Some of our undergraduate courses do not currently accept any T level qualifications. These include: Medicine, Medical Sciences, Biochemistry, Sport and Exercise Science, Psychology, and Neuroscience.

If you’re unsure if a course accepts T levels or want to check if your T level is accepted, you can contact our Admissions team by scanning the QR code. They’re always happy to help.
